ALMONARD

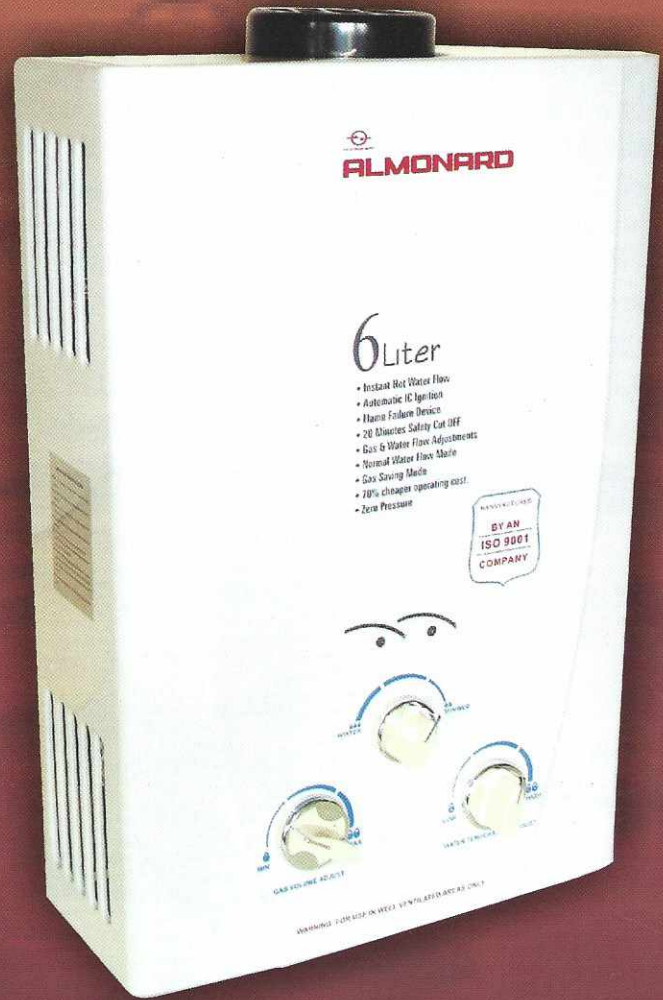

Up to

70%

Cheaper than using Electricity

- Highly Reliable
- Very Economical
- Hassle Free Operation
- Fitted Safety Devices ensure total safety of appliance and its users.
- Also available with low water pressure start facility.

Fully Automatic

INSTANT GAS WATER HEATER

Italian Design

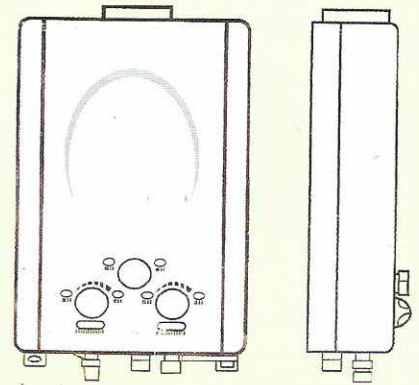

AN ISO 9001-2008 CERTIFIED COMPANY

INSTANT GAS WATER HEATER

INTRODUCTION : ALMONARD presents to its valued customers, entirely a different type of water heater namely INSTANT GAS WATER HEATER which is highly efficient and user's friendly. It provides hassle free operation especially in the event of long unscheduled electric power cuts. Since LPG is cheaper than electricity, using GAS WATER HEATER is more economical than Electric Water Heater.

OPERATION : Cold water is released into the heater by turning on the tap. It passes through the water valve assembly. This assembly opens the gas valve, releasing gas into the burners. A spark ignition system ignites the gas automatically. In case the burners fail to light up or extinguish during operation an automatic safety mechanism terminates the gas supply. The cold water flows through the heat exchanger (located directly above the burners), where it is heated and it passes to the outlet. When the hot water tap is closed, the flow of gas to the burners is shut off. The tap regulates both, the flow of water as well as gas to the system. Temperature is controlled by regulating flow of water as well as gas to the system.

INSTALLATION : The water heater must be installed in a place outside the bathroom and with good ventilation. Proper exhaust fan should be installed to drain the smoke outside.

GAS WATER HEATER

Specification of Gas Water Heater

Capacity	6 Ltrs./min	10Ltrs./min	16Ltrs./min
Heat Input (K.watts)	12	20	32
Gas Type	LPG		
Ignition	Water Controlled automatic ignition		
Water Pressure (Bar)	0.3 - 5.0		
Power	DC-1.5V 2 Cells		

Connection Dimensions

Water Inlet Pipe	½" BSP
Water Outlet Left Pipe	½" BSP
Gas Pipe	½" BSP
Gas Inlet Nozzle	8 mm

Safety Devices :

- 1 Flame Failure Device :** The Supply of gas stops, in case there is no flame or the flame extinguishes suddenly .
- 2 Overheating Safety Device :** If the water is overheated above 80°C the gas supply switches off automatically to prevent overheating.
- 3 20-Minutes Safety Device :** The water heater will stop automatically after running continuously for 20 min. It restarts by closing the water tap and then opening it again.
- 4 Automatic Gas Regulatory System :** In case of discontinuity in the flow of water from its source. Gas valve will automatically turn off.
